

Why choose Liniar reversible windows?

Fully reversible window

The moving pane rotates through a full 180° cycle, engaging on a safety catch and enabling the external glass to be safely cleaned from the inside of the property.

Fluid motion

The rotating mechanism keeps the moving pane from intruding into the inside of the room – so no snagging on curtains or blinds.

Patented innovations

The reversible window includes patented features such as Liniar's co-extruded bubble gasket, thermal dam and glazing flipper.

Fully flush on both sides

Offering a beautifully aesthetic appearance, Liniar's reversible window is flush on both the inside and the outside.

Slim sightlines

Featuring one of the slimmest PVCu profile sightlines on the market, the Liniar reversible window is designed to allow maximum light into the room.

Strength and size

The Liniar reversible window can span sash sizes as large as 1250mm by 1325mm with full accreditation, making it perfect for commercial applications.

High thermal efficiency

The reversible window system is manufactured with Liniar's unique multi-chambered EnergyPlus profile and reduced steel content, giving it a high thermal performance.

U-values as low as 0.9

Triple glazing ready, with 28mm double or 36 or 40mm triple glazed options available, U-values as low as 0.9 W/m²K can be achieved.

Matching products

The Liniar reversible window complements other chamfered products within the Liniar range, including bi-folding and patio doors and conservatories.

Supreme weather performance

With a triple seal arrangement, the Liniar reversible window has passed the most stringent weather testing, able to withstand storm force winds.

Clever design features

For example, an easy fit, one-piece drip bar with concealed fixings helps to protect the window from severe weather conditions.

Security assured

As you'd expect, the reversible window is fully compliant with PAS24, Secured By Design and Part Q security testing for peace of mind.

Choice of hardware

The reversible window has been designed to suit both PN and Yale reversible gearing, providing a choice for fabricators.

Cyclic tested

The reversible window has been tested by Liniar's robot, with full opening and reverse cycles tested to xxxxx cycles for lasting durability.

Choice of colour options

Stocked colours include white or cream substrate, black external foil or 7016 grey external foil – both on white. Special colours are available on longer lead times.

Wide range of applications

Ideal for high-rise buildings or difficult-to-access windows due to its 'easy to clean' nature, the reversible window can also be used in place of standard casements.

Fully compatible

With a flat, chamfered finish, the Liniar reversible window offers a contemporary finish and is compatible with the full 70mm suite.

Fully guaranteed

All Liniar frames are guaranteed not to warp, crack or discolour for a minimum of 10 years.

Your Liniar stockist is:

7 great reasons to choose Liniar

Innovative – Liniar’s string of patents and registered designs is testament to its ongoing new product development
